

Efficient Re-use and Re-targeting of Online Learning Materials with the ILIAS Broker-Tool (IBO)

1st International ILIAS Conference - Hamburg

6th September 2002

Dr. Joachim von Kiedrowski
QUALITUS GmbH

Structure of the Presentation

- Need for Re-use and Re-targeting
- Production of learning units with IBO
 - Functionality for Re-use
 - Functionality für Re-targeting
- Advantages and Problems of Re-use and Re-targeting

The dilemma of producing e-learning-materials

- High costs of producing e-learning-materials
 - market provides broad and unspecific e-learning-contents (easier to refinance)
- Learners demand specific materials with a larger vocational relevance
 - expensive to produce (not easy to refinance)

- **Re-use** of content in several learning units
 - **Re-targeting:** adapt content to new purposes and target groups
- helps to produce e-Learning material at low costs
- considers the learners needs

The „ILIAS Broker Tool“ (IBO Tool) supports

- Re-Use and
- Re-Targeting

of existing parts of learning units in other (new) learning units.

The institutional Background

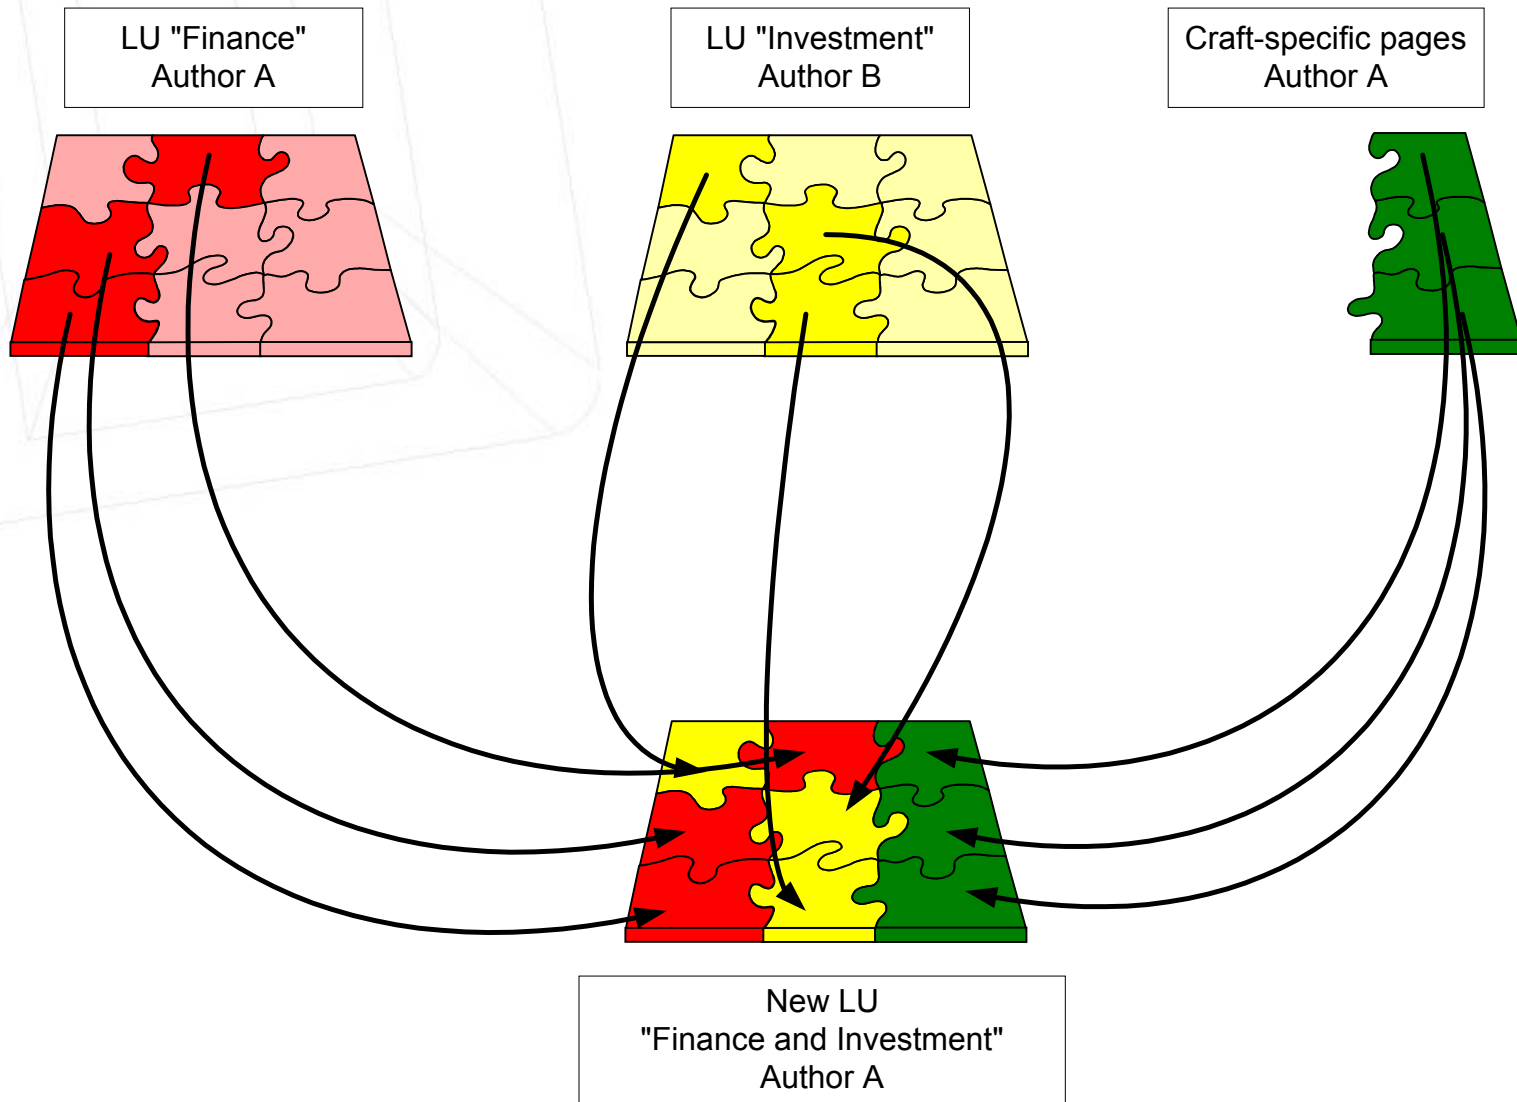

- **Project MERCUR**
offered courses: “business administration in the craft trades”
 - a general (all-crafts) course
 - a craft-specific course for the roofer craft
- **Project Meisterassistent/in**
offered courses: “assistant master craftsman”
 - for apprentices in the baker craft
 - for apprentices in the hairdresser craft

Characteristics of the Projects

4 different target groups

- with nearly identical curricula in each project
 - but with craft-specific needs
- common parts of the learning units can be used
- only craft-specific parts of the learning units have to be produced from scratch

Production of a new course with the IBO TOOL

The necessity of meta data

- As ILIAS stores the content in a data base, it is possible to find pages by using a search engine
- Therefore the content has to be described by meta data to enable authors to identify and to locate content
- ILIAS considers Metadata concepts (e.g. IMS, Ariadne, Dublin Core)

Keywords:

Type of material: Standardtext

Depth of material: Basiswissen

Pages copyable: Yes No

IBO categories: Gast
1. Gruppe der Bau- und Ausbaugewerbe
1.4 Dachdecker
2. Gruppe der Elektro- und Metallgewerbe
3. Gruppe der Holzgewerbe
4. Gruppe der Bekleidungs-, Textil- und Ledergewerbe
5. Gruppe der Nahrungsmittelgewerbe
5.57. Bäcker

Internet

Re-use of single pages

Single pages can be re-used in two ways:

Referencing Pages

- Page remains part of the origin learning unit
- Page can not be changed and modified in the new learning unit
- If the author of the origin learning unit changes the page, the the referenced page in the new learning unit will change too
- The author of the origin learning unit can see in his „Page List“ which learning units refer to his pages

Internet

Notification System

- If the author changes pages in an origin learning unit ILIAS automatically generates a notification for all authors who are referencing to those pages
- The author can add comments to the notification

- Page becomes part of the new learning unit
- Page can be changed and modified in the new learning unit (Re-targeting)
- The author of the origin learning unit has no influence on site changes of other authors

- Adapt existing learning units to new target groups
- Assign learning units to learners of specific target groups
 - by specifying the attributes of the target group in the **user profile** (e.g. profession)
 - by specifying the attributes of the target group in the **learning unit** (“**IBO**”-**Category**: e.g. profession)

Advantages of Re-Use and Re-Targeting with IBO

- Reduction of redundant work
 - pages only have to be produced once
 - similar pages can be copied and reused
 - changes on referred pages are automatically adapted in all learning units

Problems of Re-use and Re-targeting with IBO

- “metadata-dilemma”
- reliability of content originally produced for another craft sector
 - quality of content made by another author has to be proved
- content-ownership-problem
 - who earns the money?
 - billing gets more complicated with re-use and re-targeting
